

pulcirk

WHERE SIMPLICITY MEETS INNOVATION

pulcirk

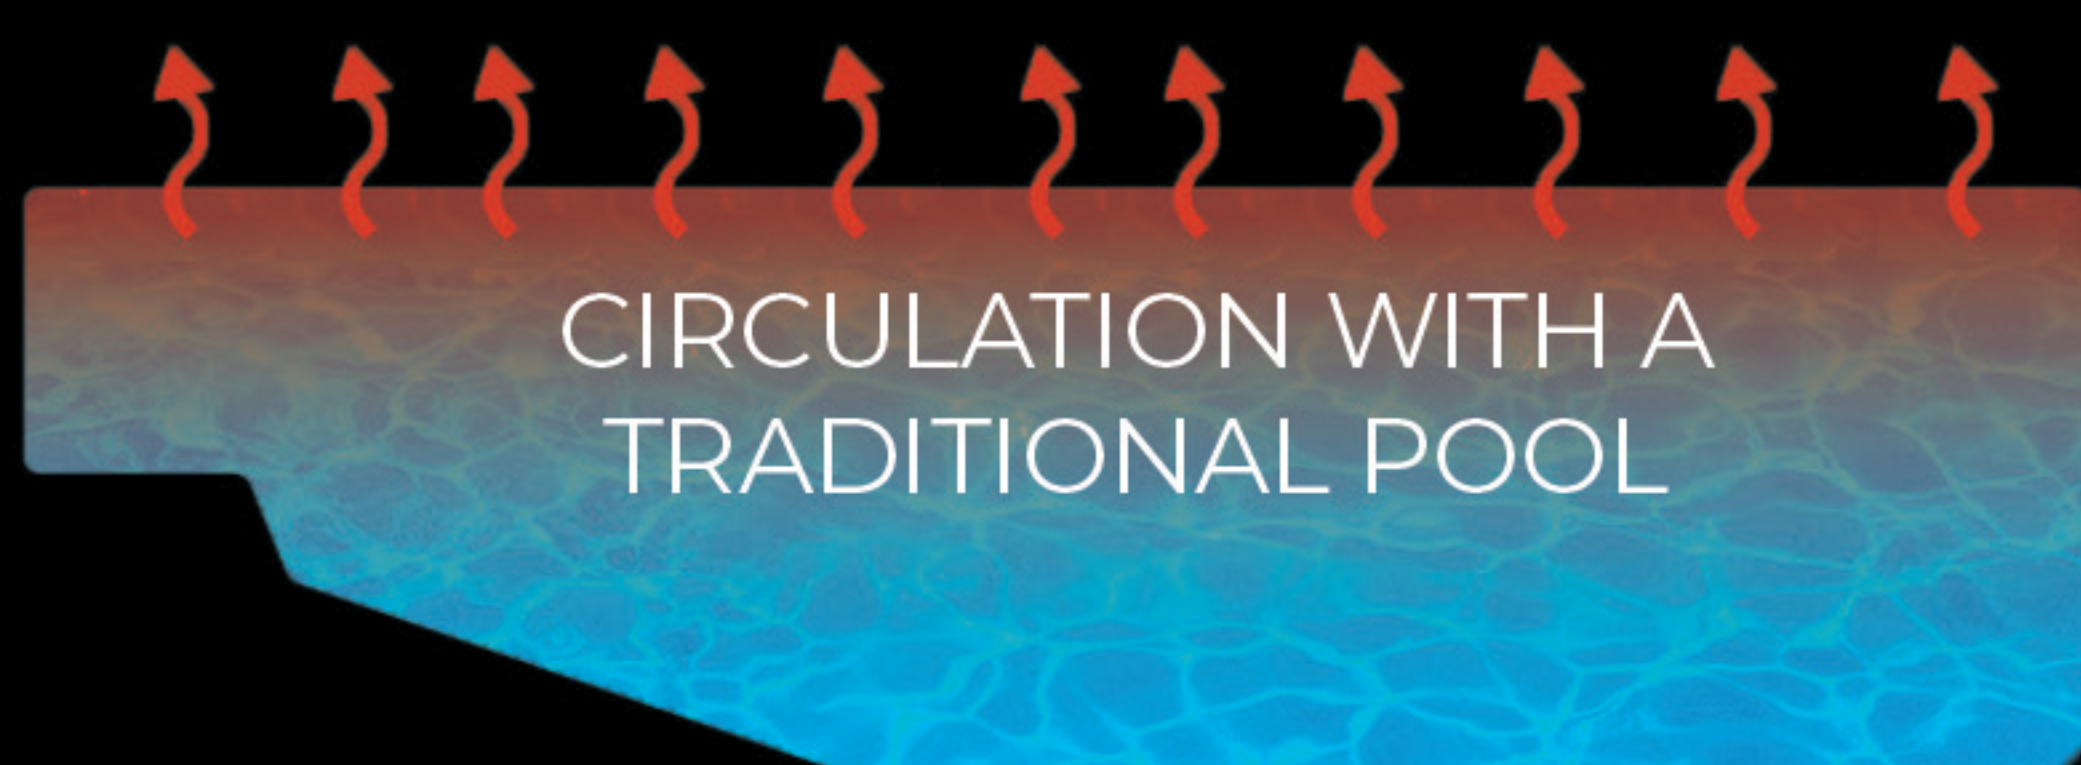

pulcirk

INNOVATIVE CIRCULATION. SIMPLIFIED.

PULcirk is an advanced in-floor pool circulation system engineered to deliver freshly filtered water throughout the entire pool—eliminating dead zones while ensuring consistent heat and chemical distribution. Its streamlined single-zone design simplifies installation, reduces build costs, and can lower chemical and energy costs by up to 40%. The result is a more efficient pool with cleaner water and a better overall swimming experience.

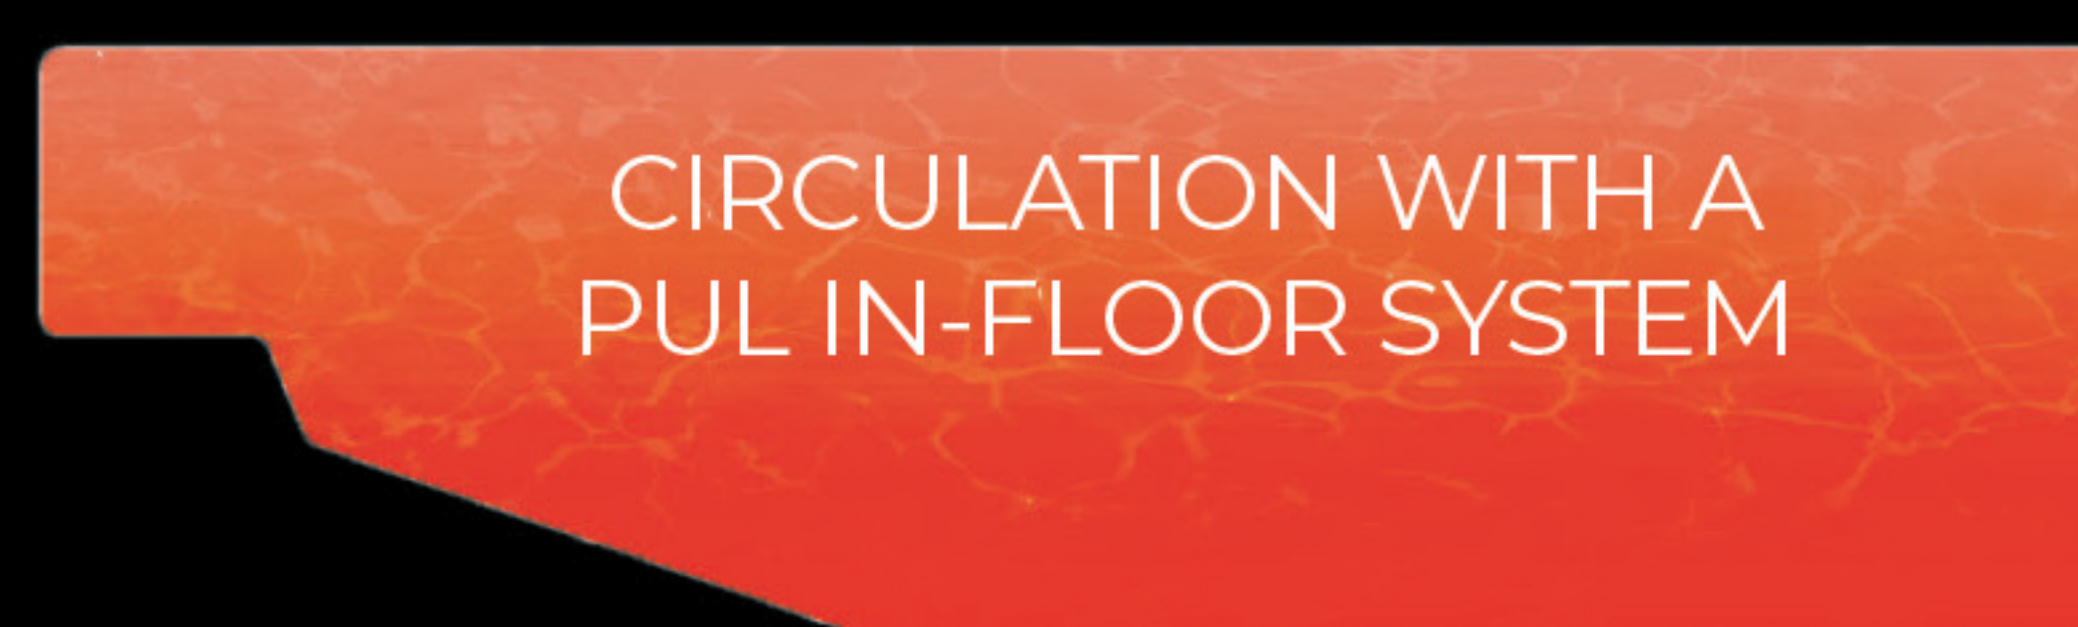

Time adjustable rotating jets pop up, in a single zone, sweep freshly-filtered water throughout the entire pool, then disappear back into the floor

CIRCULATION WITH A
TRADITIONAL POOL

Traditional pools circulate water near the pool surface resulting in more wasted chemicals and heat lost to the environment

CIRCULATION WITH A
PUL IN-FLOOR SYSTEM

By circulating water through the pool floor, PULcirk can save you up to 30% in chemicals and 40% in heating costs

PUL CONTROLLER

The PUL Controller regulates water flow to the PUL Jets to deliver maximum circulation throughout the pool. As the only single-zone in-floor circulation system, the PUL Controller offers simple 30, 60, or 90-second nozzle duration adjustments at the flip of a switch. The result is more efficient circulation, simplified installation, and lower overall build costs..

PUL JETS

The PUL Jet is engineered to deliver unmatched performance, featuring the highest-flow nozzles available in a standard 2" riser. Its innovative Cam Logic technology enables both clockwise and counterclockwise rotation, maximizing circulation across the entire pool. Built for durability, each jet includes commercial-grade, 18-position weighted nozzles for long-lasting, reliable operation.

Available in multiple colors to complement any pool finish, PUL Jets are backed by a limited lifetime warranty for added peace of mind.

PULcirk is available in multiple system sizes:

- 3 jets
- 4 jets
- 6 jets
- 8 jets

Available in a range of colors to complement your pool finish.

THE CLEAR ADVANTAGE

- Extended nozzle durations are adjustable through the PUL Controller
- Up to 40% more efficient resulting in increased chemical and energy savings
- One of the most capable in-floor circulation systems on the market

AVAILABLE SYSTEM FEATURES	PUL CIRK	PARAMOUNT ECOPOOL	QUIKCIRC
Simple 30, 60, or 90-second nozzle duration adjustments at the flip of a switch	✓	X	X
Nozzles pre-configured for simple time-efficient start up	✓	X	X
Counter rotating nozzles	✓	X	X
System pause feature for servicing	✓	✓	✓
Full flow 100% of the time	✓	X	X
Simple single zone operation	✓	X	X
